

Stallion Rail Attaching Bracket

INSTALLATION GUIDE

What you need:

Stallion Rail

Bending tool

Attaching Bracket

1 Use end of rail and slide through the first opening of the bracket (closest to the plastic insulator).

2 Use your bending tool (or hand), and fold the rail away from you to create bend.

3 Remove bending tool and give extra bend with hand to end of rail.

4 Then slide tongue of rail into second opening on bracket.

5 Then pull and your attaching bracket should look like so.

6 Once tensioner is installed, bulge on inside of bracket will be pulled through.
